Dimensions of Metric DIN 562 thin pattern square nuts

D	S	Е	M	WEIGHT IN KG PER 1000 PCS
2	4	5	1.2	0.13
2.5	5	6.3	1.6	0.27
3	5.5	7	1.8	0.35
4	7	8.9	2.2	0.64
5	8	10.2	2.7	1.06
6	10	12.7	3.2	1.93
8	13	16.5	4	4.01
10	17	21.6	5	8.80

Aspen Fasteners 4807 Rockside Road, Suite 400, Independence, OH 44131 USA www.aspenfasteners.com | aspensales@aspenfasteners.com | 1-800-479-0056

Metric DIN 562 thin pattern square nuts are four sided nuts. They are thinner than their DIN 557 counterparts. Similarly, their geometry provides a greater surface area to apply higher torque when tightening and also a greater surface are in contact with the part being fastened, thereby increasing the resistance to loosening. Being thinner provides the advantage of being able to fit into tighter spaces. Aspen Fasteners offers the following sizes for immediate delivery from stock:

Diameters ranging from M3 to M10. View available parts by clicking on the following link: metric DIN 562 thin pattern square nuts

DIN (**D**eutsches **I**nstitut für **N**ormung - German Institute for Standardization) standards are issued for a variety of components including industrial fasteners as metric DIN 562 thin pattern square nuts. The DIN standards remain common in Germany, Europe and globally even though the transition to ISO standards is taking place. DIN standards continue to be used for parts which do not have ISO equivalents or for which there is no need for standardization.

1) Mechanical properties of stainless steel for metric DIN 562 thin pattern square nuts

Stainless steels can be divided into three groups of steel - austenitic, ferritic and martensitic. Austenitic steel is by far the most common type (>90% of commercial fasteners). The steel groups and strength classes are designated by a four-digit sequence of letters and numbers (eg A2-70) as shown in the following table. DIN EN ISO 3506 governs screws and nuts made from stainless steel.

			Screws, Nuts and Bolts					
Steel group	Steel grade	Strength class	Tensile strength N/mm ²	Tensile strength PSI	Dia range	Nut Load N/mm²		
		50	500	70,000	<=M39	500		
Austenitic	A2 and A4	70	700	100,000	<=M20	700		
		80	800	118,000	<=M20	800		

The tensile stress is calculated with reference to the tensile stress area (see DIN EN ISO 3506-1979). Nuts to be paired with same grade of stainless steel screws

Steel group	Property Strength class	Made From	Characteristics
	50	A1, A2	Soft; cold worked, turned and soft pressed fasteners
Austenitic	70	A2, A4	Cold worked, normal strength formed fasteners
	80	A2, A4	Extreme cold worked, high strength, special applications
