5	10.5	2.1	20-25	30

All measurements are in mm

Metric ISO 15984 Open End Blind Rivets with Break Pull Mandrel and Flat Countersunk Head (also known as flat head break stem rivets) are tubular rivets with an integrated mandrel through the center. The rivet is inserted through a drilled hole in the parts to be fastened until the flat countersunk head lies flush with the surface. A specialized tool is used to pull the mandrel back through the body of the rivet while holding the rivet in place. As the mandrel is pulled through the body it caused the blind end to deform outward until the mandrel snaps leaving a tightly riveted joint and the head of the rivet lying flush with the surface. Aspen Fasteners offers an extensive range of metric Metric ISO 15984 Open End Blind Rivets with Flat Countersunk Head as well other inch and metric industrial fasteners for immediate delivery from stock. The following sizes of metric Metric ISO 15984 Open End Blind Rivets with Flat Countersunk Head are available for immediate shipping from stock: Diameters ranging from M3 to M5 in lengths up to 30mm, in stainless steel A2. View parts by clicking on the following link: [Metric ISO 15984 Open End Blind Rivets with Flat Countersunk Head](#)

1) **Mechanical properties of stainless steel for metric ISO 15984 Open End Blind Rivets with Flat Countersunk Head**

Stainless steels can be divided into three groups of steel - austenitic, ferritic and martensitic. Austenitic steel is by far the most common type (>90% of commercial fasteners). The steel groups and strength classes are designated by a four-digit sequence of letters and numbers (eg A2-70) as shown in the following table. DIN EN ISO 3506 governs screws and nuts made from stainless steel.

Steel group	Steel grade	Strength class	Screws, Nuts and Bolts			
			Tensile strength N/mm ²	Tensile strength PSI	Dia range	Nut Load N/mm ²
Austenitic	A2 and A4	50	500	70.000	<=M39	500
		70	700	100.000	<=M20	700
		80	800	118.000	<=M20	800

The tensile stress is calculated with reference to the tensile stress area (see DIN EN ISO 3506-1979). Nuts to be paired with same grade of stainless steel screws

Steel group	Property Strength class	Made From	Characteristics
Austenitic	50	A1, A2	Soft; cold worked, turned and soft pressed fasteners
	70	A2, A4	Cold worked, normal strength formed fasteners
	80	A2, A4	Extreme cold worked, high strength, special applications

2) Chemical composition of stainless steel metric ISO 15984 Open End Blind Rivets with Flat Countersunk Head

Grade	USA Grade	Material designation	Material no.	C %	Si ≤ %	Mn ≤ %	Cr %	Mo %	Ni %
A 2	304	X 5Cr Ni 1810	1.4301	≤ 0.07	1.0	2.0	17.5 to 19.5	-	8.0 to 10.5
		X 2 Cr Ni 1811	1.4306	≤ 0.03	1.0	2.0	18.0 to 20.0	-	10 to 12.0
		X 8 Cr Ni 19/10	1.4303	≤ 0.07	1.0	2.0	17.0 to 19.0	-	11.0 to 13.0
A 4	316	X 5 Cr Ni Mo 1712	1.4401	≤ 0.07	1.0	2.0	16.5 to 18.5	2.0 to 2.5	10.0 to 13.0
		X 2 Cr Ni Mo 1712	1.4404	≤ 0.03	1.0	2.0	16.5 to 18.5	2.0 to	10 to 13

3) Chemical composition of steel metric ISO 15984 Open End Blind Rivets with Flat Countersunk Head

PROPERTY CLASS	MATERIAL AND TREATMENT	CHEMICAL COMPOSITION LIMITS %				TEMPERING TEMP °C MIN.
		C		P	S	
		min.	max.	max.	max.	
4.6. 4.8. 5.8. 6.8	Low or medium carbon steel	-	0.55	0.05	0.06	-
8.8	Medium carbon steel quenched. tempered	0.25	0.55	0.04	0.05	425
9.8	Medium carbon steel quenched. tempered	0.25	0.55	0.04	0.05	425
10.9	Medium carbon steel additives e.g. boron. Mn. Cr or Alloy steel - quenched. tempered	0.20	0.55	0.04	0.05	425
12.9	Alloy steel - quenched. tempered	0.20	0.50	0.035	0.035	380
